No. 21

Introduced by Senator Alquist

May 11, 2009

Senate Resolution No. 21—Relative to electronic health records.

1 WHEREAS, Congress approved, and President Barack Obama 2 signed, the Health Information Technology for Economic and Clinical Health (HITECH) Act, as a component of the American Recovery and Reinvestment Act of 2009, to invest in electronic 5 health records and new technology that will reduce medical errors, 6 bring down health care costs, ensure privacy, and save lives; and 7 WHEREAS, The Congressional Budget Office estimates that 8 HITECH could provide more than \$36 billion over six years for health information exchange infrastructure and incentive payments 10 to physician practices adopting electronic health records, chronic disease management systems, and other technologies; and 11 12 13

WHEREAS, In California, this funding could provide more than \$3 billion to providers for the adoption and meaningful use of health information technology; and

WHEREAS, In California, physician organizations, such as medical groups and independent practice associations, have been the leading entities in the acquisition and deployment of health information technology, benefiting approximately 11 million Californians under their care; and

WHEREAS, These systems are known to reduce medical errors, duplication of tests, and enable physicians to improve the quality of health care service delivery; and

 $SR 21 \qquad \qquad -2-$

WHEREAS, The HITECH Act, as currently enacted, allows individual physicians to apply for incentive payments, it does not explicitly allow all medical groups and independent practice associations to apply on behalf of their physicians; and

WHEREAS, The acquisition and deployment of health information technology is expensive, time consuming, and difficult for individual physicians to accomplish; and

WHEREAS, Much work remains to be done to meet the act's requirements for meaningful use, even by organizations that have adopted health information technology systems; and

WHEREAS, Since more than 59,000 of California's 90,000 active practicing physicians practice in medical groups and independent practice associations, and these delegated models are an important part of health care delivery in California, it is both practical and efficient to include these entities among those that can apply for stimulus funding under the HITECH Act; now, therefore, be it

Resolved by the Senate of the State of California, That the Senate urges the President and the Congress of the United States to provide further amendment to, or regulatory clarification of, the HITECH Act, so to clarify that medical groups and independent practice associations may apply for stimulus funding on behalf of their physicians who have accepted access stimulus funding through agreements with individual physicians who receive stimulus funding and choose to transfer that funding allotment to a medical group or independent practice associations that will utilize the funds for the deployment of health information technology systems purchased by the group; and be it further

Resolved, That the Secretary of the Senate transmit copies of this resolution to the author for appropriate distribution.
